Accelerated Mobile Power executes contracts for 76MW, utilized in mobile industrial Microgrids.

Accelerated Mobile Power (AMP) has executed contracts for mobile power with an industry-leading industrial service company for mobile Microgrid applications, totaling 76MW. Assets begin deployment at the end of August 2023 and will continue through the end of the year.

AMP provides turnkey mobile power consisting of assets, operation, maintenance, mobilization and monitoring to ensure customers can focus on their business while AMP delivers and manages the power on location. Power nodes being deployed include the Dynamis Power Solutions DT35 turbine generator package, based upon aero derivative technology which provides a unique value proposition for hyper mobile applications. The package enables AMP's team to install and commission the power plant on site within 14 hours without the use of heavy cranes, forklifts and rigging via a patented 2-trailer operational and transportable design.

These recently executed agreements illustrate AMP's turnkey contract power services are resonating with the industry and customers.
